Army Times Seeking the Military Suicide Solution
Podcast, Episode 44: Dr. Amy Taft, suicide prevention in children of military families

This is another in a series of Safety Guides for installation commanders, leaders, and workplace supervisors to help them protect their work forces against accidental losses. The focus here is one of the most common and most costly workplace injuries -- back injury. Applying the methods outlined in this booklet will help leaders mount effective back-injury-prevention programs. It contains ideas developed throughout the Army during the early phases of our back-emphasis effort. New approaches include added emphasis on ergonomics and contributions from a broader spectrum of Army health care professionals. Learning from earlier loss control successes, we know the Army's back-injury-prevention campaign must be a shared task. It can succeed only through coordinated staff action. Like all important leadership responsibilities, elimination of back-related losses is a "Commander's Program. But commanders lead, they do not administer. Keeping a lid on back-injury costs demands a lot of attention to detail from first-line

supervisors and help from the installation's staff specialists. Chronic dollar losses are so great that their reduction will easily return the cost of control. The ideas and management tools in this pamphlet will help installation officials develop their own unique programs. While effective prevention of back injuries is required by Army and Federal regulations, no single approach is mandated. But most workplaces have room for improvement. Their leaders can profit from the prevention and care strategies outlined in this guide.

CARD 5. JOINT TRAUMA SYSTEM DEVELOPMENT, CONCEPTUAL FRAMEWORK, AND OPTIMAL ELEMENTS 6. The United States Military Joint Trauma System Assessment: A Report Commissioned by the US Central Command Surgeon Sponsored by Air Force Central Command A Strategic Document to Provide a Platform for Tactical Development (2018)

INTRODUCTION This current set of medical guidelines has gone through some significant improvements since the original release in 2014 and were developed through a collaboration of Emergency Medicine professionals, experienced Flight Medics, Aeromedical Physician Assistants, Critical Care Nurses, and Flight Surgeons. There has been close coordination in the development of these guidelines by the Joint Trauma System, Committee of En Route Combat Casualty Care and the Committee of Tactical Combat Casualty Care. Our shared goal is to ensure excellent en route care that is standard across all evacuation and emergency medical pre-hospital units. It is our vision that all of these enhancements and improvements will advance en route care across the services and the Department of Defense. The CCFP Program Office facilitates appropriate training and medical education to the CCFP providers. The CCFP program of instruction ensures the appropriate skills and knowledge required for CCFPs to apply these medical guidelines during aeromedical evacuation. Unit medical trainers and medical directors should evaluate CCFPs ability to follow and execute the medical instructions herein. These medical guidelines are intended to guide Critical Care Flight Paramedics (CCFP) and prehospital professionals in the response and management of emergencies and the care and treatment of patients in

both garrison and theater of war environments. Unit medical providers are not expected to employ these guidelines blindly. Unit medical providers are expected to manipulate and adjust these guidelines to their unit ' s mission and medical air crew training / experience. Medical directors or designated supervising physicians should endorse these guidelines as a baseline, appropriately adjust components as needed, and responsibly manage individual unit medical missions within the scope of practice of their Critical Care Flight Paramedics, Enroute Critical Care Nurses, and advanced practice aeromedical providers.
