engineer's beam theory or classical beam theory) is a simplification of the linear theory of elasticity which provides a means of calculating the load-carrying and deflection characteristics of beams. It covers the case for small deflections of a beam that are subjected to lateral loads only. It is thus a special case of Timoshenko beam theory.

EULER-BERNOULLI AND TIMOSHENKO BEAM THEORIES

The Bernoulli-Euler beam theory (Euler pronounced 'oiler') is a model of how beams behave under axial forces and bending. It was developed around 1750 and is still the method that we most often use to analyse the behaviour of bending elements.

Abstract: This paper presents an exact solution to the Timoshenko beam theory (TBT) for bending, second-order analysis, and stability. The TBT covers cases associated with small deflections based on shear deformation considerations, whereas the Euler-Bernoulli beam theory neglects shear deformations.

Euler-Bernoulli Beams: Bending, Buckling, and Vibration

Euler-Bernoulli beam theory is the oldest, the simplest classical theory for beam bending. It is used in typical hand calculations of beam deflection. It assumes that the cross-section of the beam is always

The Euler-Bernoulli equation for the dynamic bending of slender, isotropic, homogeneous beams of constant cross-section under an applied transverse load $(,)$ is $E I \partial^4 w \partial x^4 + m \partial^2 w \partial t^2 = q(x, t)$

$$\{\displaystyle EI\sim\{\cfrac{\partial^4 w}{\partial x^4}\}+m\sim\{\cfrac{\partial^2 w}{\partial t^2}\}=q(x,t)\}$$

It is generally considered that a Timoshenko beam is superior to an Euler-Bernoulli beam for determining the dynamic response of beams at higher frequencies but that they are equivalent at low frequencies.

Equation (1.10) is satisfied by the wavenumber relationship in equation (8.7), which gives credibility to the assume spatial solution. The values in equations (1.9) and (1.10) are coefficients that depend on the boundary conditions discussed in 8.1.2. The spatial solution gives eigen function modes shapes.
