It looked for a while like Michael Collins would spend his life breaking concrete and throwing rocks for the Vittorio Scalese Construction Company. He liked the work and he liked the pay. But a chance remark by one of his coworkers made him realize that he wanted to involve himself in something bigger, something more meaningful than crushing rocks and drinking beer. In his acclaimed first memoir, *Hot Lights, Cold Steel*, Collins wrote passionately about his four-year surgical residency at the prestigious Mayo Clinic. *Blue Collar, Blue Scrubs* turns back the clock, taking readers from his days as a construction worker to his entry into medical school, expertly infusing his journey to become a doctor with humanity, compassion and humor. From the first time he delivers a baby to being surrounded by death and pain on a daily basis, Collins compellingly writes about how medicine makes him confront, in a very deep and personal way, the nature of God and suffering—and how delicate life can be.

What does a doctor do when he thinks his best is not good enough? Matthew Barrett, thirty-one years old and fresh out of residency, is drafted and sent to Vietnam as a combat surgeon in 1967 at the height of the Vietnam War. Compassionate and sensitive to a fault, he is determined to make a difference but quickly finds his idealism crushed by the pain, suffering, and indifference that surround him. Shamed by his inexperience and tormented by his failures, he slowly unravels. Only the love of Therese Hopkins, a nurse, keeps him from falling apart. But will their love survive the grinding horror of war? Matthew's journey of redemption takes him from combat surgeon in Vietnam to transplant doctor in Ohio and, finally, to physician in a relief camp in Biafra, exploring how the caring and compassion that draws young people to pursue the healing arts can also sow the seeds of their own destruction, and how love may be the only thing that can finally make all bleeding stop.

When Michael Collins decides to become a surgeon, he is totally unprepared for the chaotic life of a resident at a major hospital. A natural overachiever, Collins' success, in college and medical school led to a surgical residency at one of the most respected medical centers in the world, the famed Mayo Clinic. But compared to his fellow residents Collins feels inadequate and unprepared. All too soon, the euphoria of beginning his career as an orthopedic resident gives way to the feeling he is a counterfeit, an imposter who has infiltrated a society of brilliant surgeons. This story of Collins' four-year surgical residency traces his rise from an eager but clueless first-year resident to accomplished Chief Resident in his final year. With unparalleled humor, he recounts the disparity between people's perceptions of a doctor's glamorous life and the real thing: a succession of run down cars that are towed to the junk yard, long weekends moonlighting at rural hospitals, a family that grows larger every year, and a laughable income. Collins' good nature helps him over some of the rough spots but cannot spare him the harsh reality of a doctor's life. Every day he is confronted with decisions that will change people's lives—or end them—forever. A young boy's leg is mangled by a tractor: risk the boy's life to save his leg, or amputate immediately? A woman diagnosed with bone cancer injures her hip: go through a painful hip operation even though she has only months to live? Like a jolt to the system, he is faced with the reality of suffering and death as he struggles to reconcile his idealism and aspiration to heal with the recognition of his own limitations and imperfections. Unflinching and deeply engaging, *Hot Lights, Cold Steel* is a humane and passionate reminder that doctors are people too. This is a gripping memoir, at times devastating, others triumphant, but always compulsively readable.

Michelle Au started medical school armed only with a surfeit of idealism, a handful of old ER episodes for reference, and some vague notion about "helping people." *This Won't Hurt a Bit* is the story of how she grew up and became a real doctor. It's a no-holds-barred account of what a modern medical education feels like, from the grim to the ridiculous, from the heartwarming to the obscene. Unlike most medical memoirs, however, this one details the author's struggles to maintain a life outside of the hospital, in the small amount of free time she had to live it. And, after she and her husband have a baby early in both their medical residencies, Au explores the demands of being a parent with those of a physician, two all-consuming jobs in which the lives of others are very literally in her hands. Au's stories range from hilarious to heartbreaking and hit every note in between, proving more than anything that the creation of a new doctor (and a new parent) is far messier, far more uncertain, and far more gratifying than one could ever expect.

Katrina Firlik is a neurosurgeon, one of only two hundred or so women among the alpha males who dominate this high-

pressure, high-prestige medical specialty. She is also a superbly gifted writer—witty, insightful, at once deeply humane and refreshingly wry. In *Another Day in the Frontal Lobe*, Dr. Firlik draws on this rare combination to create a neurosurgeon's Kitchen Confidential—a unique insider's memoir of a fascinating profession. Neurosurgeons are renowned for their big egos and aggressive self-confidence, and Dr. Firlik confirms that timidity is indeed rare in the field. "They're the kids who never lost at musical chairs," she writes. A brain surgeon is not only a highly trained scientist and clinician but also a mechanic who of necessity develops an intimate, hands-on familiarity with the gray matter inside our skulls. It's the balance between cutting-edge medical technology and manual dexterity, between instinct and expertise, that Firlik finds so appealing—and so difficult to master. Firlik recounts how her background as a surgeon's daughter with a strong stomach and a keen interest in the brain led her to this rarefied specialty, and she describes her challenging, atypical trek from medical student to fully qualified surgeon. Among Firlik's more memorable cases: a young roofer who walked into the hospital with a three-inch-long barbed nail driven into his forehead, the result of an accident with his partner's nail gun, and a sweet little seven-year-old boy whose untreated earache had become a raging, potentially fatal infection of the brain lining. From OR theatrics to thorny ethical questions, from the surprisingly primitive tools in a neurosurgeon's kit to glimpses of future techniques like the "brain lift," Firlik cracks open medicine's most prestigious and secretive specialty. Candid, smart, clear-eyed, and unfailingly engaging, *Another Day in the Frontal Lobe* is a mesmerizing behind-the-scenes glimpse into a world of incredible competition and incalculable rewards.

The American working class didn't disappear with the manufacturing economy. It transformed. Instead of unionized blue-collar men, today's working class is dominated by underpaid women in service jobs—especially health care. With recognition of this shift, Gabriel Winant argues, may come political clout.

Chilling, revelatory, and compassionate, Echo Heron's bestselling memoir offers a brutally honest account of her time as an idealistic nursing student, her entry into the workforce, and her rude awakening to the gritty realities of practice. Devoted to helping the most trying patients in some of the harshest medical environments—from emergency rooms to intensive care units—Heron boldly confronts the most serious medical dilemmas of our time. When does a patient have the right to end his or her life, how can a medical professional help someone evaluate such a decision, and what can a nurse do when doctors don't have their patients' best interests at heart? These are just a few of the critical though deeply uncomfortable questions with which Heron must grapple.

"A young doctor stumbles through his experience as a first year intern at a major New York hospital"--

Journalist Walls grew up with parents whose ideals and stubborn nonconformity were their curse and their salvation. Rex and Rose Mary and their four children lived like nomads, moving among Southwest desert towns, camping in the mountains. Rex was a charismatic, brilliant man who, when sober, captured his children's imagination, teaching them how to embrace life fearlessly. Rose Mary painted and wrote and couldn't stand the responsibility of providing for her family. When the money ran out, the Walls retreated to the dismal West Virginia mining town Rex had tried to escape. As the dysfunction escalated, the children had to fend for themselves, supporting one another as they found the resources and will to leave home. Yet Walls describes her parents with deep affection in this tale of unconditional love in a family that, despite its profound flaws, gave her the fiery determination to carve out a successful life. -- From publisher description.
