A cutting-edge book for bond market professionals. With the explosion in international bond investment, traders and investors need benchmarks to compare different markets and to measure their own performance. Brown's book explains how popular bond indices are constructed, the strengths and weaknesses of the indices, and how they differ from one another.

The Bond and Money Markets is an invaluable reference to all aspects of fixed income markets and instruments. It is highly regarded as an introduction and an advanced text for professionals and graduate students. Features comprehensive coverage of: * Government and Corporate bonds, Eurobonds, callable bonds, convertibles * Asset-backed bonds including mortgages and CDOs * Derivative instruments including futures, swaps, options, structured products * Interest-rate risk, duration analysis, convexity, and the convexity bias * The money markets, repo markets, basis trading, and asset/liability management * Term structure models, estimating and interpreting the yield curve * Portfolio management and strategies, total return framework, constructing bond indices * A stand alone reference book on interest rate swaps, the money markets, financial market mathematics, interest-rate futures and technical analysis * Includes introductory coverage of very specialised topics (for which one previously required several texts) such as VaR, Asset & liability management and credit derivatives * Combines accessible style with advanced level topics

This book is split into four distinct sections to provide a complete account of investment performance measurement. The first section examines the development of the concept of performance measurement with the evolution of benchmarks and the increasing sophistication of performance analysis. The practical implications of performance measurement are tackled in the second section, with particular emphasis on the calculations that can be used to derive a rate of return for a fund and risk is also examined in detail. The third section covers the performance measurement of pension funds over the last 25 years and the lessons that can be learned about the investment performance and measurement process. The final section considers the future prospects for performance measurement and proposes potential future

directions for the measurement of investment performance.

As cross-market bond trading has increased, it has become vital for international participants to understand the many different features that characterize the various international bond markets. Of particular interest to bond traders and investors are such factors as calculation of prices, accrued interest, yields, and durations. Bond

This book gives an introduction to the bond markets for practitioners and new entrants who need to understand what they are, how they work and how they can be used, but do not want to be intimidated by mathematical formulae. By the end of the book readers will be able to decide whether to invest in the bond market. The mathematical formulae will be relegated to the appendices and supplemented by a companion website which allows users to enter their own bond market investments, to simulate anticipated events and see the results. Patrick Brown is well-known as Chairman of the European Bond commission (recently retired) The only bond book that does not rely heavily on mathematical formulae

The book analyzes how modern portfolio theory and dynamic term structure models can be applied to government bond portfolio optimization problems. The author studies the necessary adjustments, examines the models with regard to the plausibility of their results and compares the outcomes to portfolio selection techniques used by practitioners. Both single-period and continuous-time bond portfolio optimization problems are considered.

Performance measurement and attribution are key tools in informing investment decisions and strategies. Performance measurement is the quality control of the investment decision process, enabling money managers to calculate return, understand the behaviour of a portfolio of assets, communicate with clients and determine how performance can be improved. Focusing on the practical use and calculation of performance returns rather than the academic background, Practical Portfolio Performance Measurement and Attribution provides a clear guide to the role and implications of these methods in today's financial environment, enabling readers to apply their knowledge with immediate effect. Fully updated from the first edition, this book covers key new developments such as fixed income attribution, attribution of derivative instruments and alternative investment strategies, leverage and short positions, risk-adjusted performance measures for hedge funds plus updates on presentation standards. The book covers the mathematical aspects of the topic in an accessible and practical way, making this book an essential reference for anyone involved in asset management.

This book discusses important aspects of fixed income securities in emerging economies. Key features • Clarifies all conceptual and analytical aspects of fixed income securities and bonds, and covers important interest rate and credit derivative instruments in a simple and practical way. • Examines topics such as classifications of fixed income instruments; related risk-return measures; yield curve and term structure of interest rates; interest rate derivatives (forwards, futures and swaps), credit derivatives (credit default swaps); and trading strategies and risk management. • Provides step-by-step explanation of fixed income products by including real-life examples, scenarios and cases, especially in the context of emerging markets. • Presents consistent reference of actual market practices to make the chapters practice oriented while maintaining a lucid style complemented by adequate reading inputs and clear learning outcomes. • Includes complete solutions of numericals and cases for all chapters as an eResource on the Routledge website to aid understanding. The book will serve as a ready guide to both professionals from banking and finance industry (fixed income/bond dealers; fund/investment/portfolio managers; investment bankers; financial analysts/consultants; risk management specialists), and those in academics, including students, research scholars, and teachers in the fields of business management, banking, insurance, finance, financial economics, business economics, and risk management.
