A polyolefin is a polymer produced from an olefin or alkene as a monomer. In organic chemistry, an alkene, olefin, or olefine is an unsaturated chemical molecule containing at least one carbon to carbon double bond. The simplest alkene is ethylene. α -Olefins have a double bond at the primary or β -position.

Engineering polymers comprise a special, high-performance segment of synthetic plastic materials that offer premium properties. Polyamides, commonly called nylons, were the first commercial thermoplastic engineering polymers and are the prototype for the whole family of polyamides. Nylon was a new concept in plastics for several reasons.
