LMNO Engineering flume calculator allows $0 < h < 3$ m and $0.01 < b < 16$ m, but the calculation is most accurate when used within the ISO 9826 recommendations of $h < 2$ m and $0.152 < b < 15.24$ m. For $b < 0.152$ m, C and n values are from Herschy (1995). For $b > 0.152$ m, C and n values are from ISO 9826 (1992).

There are two basic types of flowmeters: liquid and gas. Liquid is primarily measured in terms of volumetric flowrate, while gas is a mass-flow measurement because of the unique properties of gases when compared to liquids. While some volumetric technologies can measure gas flowrates, there can be problems with totalized flow.
