When should organizations contract out services traditionally produced in house? Is outsourcing another ephemeral management fad, or is it an efficient and effective means of delivering sevices and of adding value? What are the characteristics of strategically sound contracting decisions, and how can organizations prosper from the outsourcing revolution? These questions are among those tackled by Simon Domberger. Based on over a decade of research and consulting experience, its conclusions have many practical implications. The book develops an analytical decision-making framework for the assessment of contracting options, and has relevance in both the private and public sectors. Containing a wealth of illustrations and over 25 case studies, the coverage is fully international. Over 50 companies and public sector organizations are discussed, including well-known names such as Microsoft, BP, Marks & Spencer, and Samsung. This book will be valuable to all those seeking a better understanding of the outsourcing phenomenon, and useful to managers, strategists, management and business consultants, public sector administrators, policy makers, as well as to students of economics, business, management and public administration. Pre-publication Endorsements John Kay, Said Business School Oliver Hart, Harvard University Rob Grant, Georgetown University

It goes on to discuss the basic concepts of the various systems, including atmospheric and ocean, then closes with a detailed section on land applications. Due to the cross disciplinary nature of the authors' experience and the content covered, this is a must have reference book for all practitioners and students requiring an introduction to the field of remote sensing. Provides study questions at the end of each chapter to aid learning Covers all satellite remote sensing technologies, allowing readers to use the text as instructional material Includes the most recent technologies and their applications, allowing the reader to stay up-to-date Delves into laser sensing (LIDAR) and commercial satellites (DigitalGlobe) Presents examples of specific satellite missions, including those in which new technology has been introduced

Monograms have been used for many years as signatures for many things, but gained the most popularity and use in the early 20th century. In the 1920's and 1930's the monogram was in the height of fashion and the classiest gentlemen and ladies had theirs on their most fashionable pieces. The classic monograms most people will recognize are monogrammed towels or the always classic monogrammed piece of jewelry. A monogram is made from two or more overlapping letters to form a symbol or design. The most recognizable would be the first, middle, and last initials of ones name. Grab a copy today
