Presents works of art selected from the South and Southeast Asian and Islamic collection of The Metropolitan Museum of Art, lessons plans, and classroom activities.

The Secret Teachings of All Ages is perhaps the most comprehensive and complete esoteric encyclopedia ever written. The sheer scope and ambition of this book are stunning. In this book Manly P. Hall has successfully distilled the essence of more arcane subjects than one would think possible. This book explores the themes underlying ancient mythology, philosophy, and religion. Unrivaled in its beauty and completeness, it distills ancient and modern teachings of nearly 600 experts.

As a result of his visits to classrooms across the nation, Brown has compiled an engaging, thought-provoking collection of classroom vignettes which show the ways in which national, state, and local school politics translate into changed classroom practices. "Captures the breadth, depth, and urgency of education reform".--Bill Clinton.

Magicians have dazzled audiences for many centuries; however, few researchers have studied how, let alone why, most tricks work. The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena, including sensory illusions, misdirection of attention, and the appearance of mind-control and nuanced persuasion. Most studies to date have focused on either the psychological principles involved in watching and performing magic or "neuromagic" - the neural correlates of such phenomena. Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts, the history of magic reveals that scientific discovery often charts new territories for magicians. In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic. On the one hand, magic can inform psychology, with particular benefits for the cognitive, social, developmental, and transcultural components of behavioural science. Magicians have a large and robust set of effects that most researchers rarely exploit. Incorporating these effects into existing experimental, even clinical, paradigms paves the road to innovative trajectories in the study of human behaviour. For example, magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make. Moreover, magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab-based settings. Examining how magicians consistently influence spectators, for example, can elucidate important aspects in the study of persuasion, trust, decision-making, and even processes spanning authorship and agency. Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician. On the other hand, psychological science can advance the art of magic. The psychology of deception, a relatively understudied field, explores the intentional creation of false beliefs and how people often go wrong. Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities - perceptual, logical, emotional, and temporal - becomes all the more revealing when top-down influences, including expectation, symbolic thinking, and framing, join the fray. Over the years, science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences. Furthermore, on occasion science leads to the creation of novel effects, or the refinement of existing ones, based on systematic methods. For example, by simulating a specific card routine using a series of computer stimuli, researchers have decomposed the effect and reconstructed it into a more effective routine. Other magic effects depend on meaningful psychological knowledge, such as which type of information is difficult to retain or what changes capture attention. Behavioural scientists measure and study these factors. By combining analytical findings with performer intuitions, psychological science begets effective magic. Whereas science strives on parsimony and independent replication of results, magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection. This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception.

This book describes the philosophy and the use of Aleister Crowley's Thoth Tarot, a deck of Tarot cards designed by Crowley and co-designed and painted by Lady Frieda Harris. The Thoth Tarot has become one of the best-selling and most popular Tarot Decks in the world. It is also one of the most original interpretations of the tarot, incorporating astrological, numerological, Egyptian, and Qabalistic symbolism. While there are many other useful guides to this famous tarot deck, there are no others that explain the deck in its designer's own words. The book is divided into four major parts: * Part One: The Theory Of The Tarot. * Part Two: The Atu (Keys or Trumps). * Part Three: The Court Cards. * Part Four: The Small Cards. Part One is further divided into three chapters; Part Two into two chapters and an appendix; Part Three into one chapter; and Part Four into one chapter. The book includes a list of plates depicting the Tarot cards as seen by Crowley and Harris.

THE Druids boasted a faith which appears to have been as imbued with life as that of any ancient or modern religious system. although little is known generally about it.Although their religion was polytheistic in character the Druids recognized a supremacy among the gods, this Supreme being represented by the sun. Next in point Of rank came the lesser divinities, who were symbolized by the moon and stars, and, in course of time. all the celestial bodies were venerated with divine honors. This characteristic was not more marked in Druidism than in other religions of a like nature where the elements were venerated. The sun as sun was not worshiped. The arch-god was Be'l, whose glory was manifested in the sun, and in singing hymns to the luminous orb they manifested their worship to the Supreme and not to the emblem. paying their adoration to what they regarded as the supreme power and eternal being.It was doubtless this veneration of the celestial bodies which laid the foundation of the knowledge possessed by the Druids of astronomical science. to which Czesar and other writers have borne testimony. They were certainly in possession of sufficient knowledge of the motion of heavenly bodies to enable them to fix definite times for their festivals and religious ceremonies, all of which were regulated by the sun and moon, and to calculate on a thirty-year cycle of lunar years in which the month began at the Sixth day. In common with the Gauls, Teutons, and Jews, they reckoned time from evening to morning

Completely revised and updated, this new edition provides a readable, beautifully illustrated journey through world cultures and the vibrant array of sky mythology, creation stories, models of the universe, temples and skyscrapers that each culture has created to celebrate and respond to the power of the night sky. Sections on the archaeoastronomy of South Asia and South East Asia have been expanded, with original photography and new research on temple alignments in Southern India, and new material describing the astronomical practices of Indonesia, Malaysia and other Southeast Asian countries. Beautiful photographs of temples in India and Asia have been added, as well as new diagrams explaining the alignment of these structures and the astronomical underpinnings of temples within the Pallava and Chola cultures. From new fieldwork in the Four Corners region of North America, Dr. Penprase has included accounts of Pueblo skywatching and photographs of ceremonial kivas that help elucidate the rich astronomical knowledge of the Pueblo people. The popular "Archaeoastronomy of Skyscrapers" section of the book has been updated as well, with new interpretations of skyscrapers in Indonesia, Taiwan and China.With the rapid pace of discovery in astronomy and astrophysics, entirely new perspectives are emerging about dark matter, inflation and the future of the universe. The Power of Stars puts these discoveries in context and describes how they fit into the modern perspective of cosmology, which has arisen from the universal human response to the sky that has inspired both ancient and modern cultures.

Egyptologist Gerald Massey challenged readers in A Book of the Beginnings to consider the argument that Egypt was the birthplace of civilization and that the widespread monotheistic vision of man and the metaphysical was, in fact, based on ancient Egyptian myths. In The Natural Genesis, Massey delivers a sequel, delving deeper into his compelling polemic. Volume II provides detailed discourse on the Egyptian origin of the delicate components of the monotheistic creed. With his agile prose, Massey leads an adventurous examination of the epistemology of astronomy, time, and Christology--and what it all means for human culture. British author GERALD MASSEY (1828-1907) published works of poetry, spiritualism, Shakespearean criticism, and theology, but his best-known works are in the realm of Egyptology, including A Book of the Beginnings and Ancient Egypt: The Light of the World.

A labyrinth of intrigue... Lieutenant Agrus Kos enjoys his work. A top-notch officer of the city guard, he's been on the force over fifty years. He works alone. And the League of Wojek never had problems with him or his work. Until now. They gave him a partner to train, who promptly got himself killed. And the more he looks into the death, the less he likes it. Something dark is moving within the guilds of Ravnica.

For over two decades, Donald Michael Kraig's Modern Magick has been the world's most popular step-by-step guide to working real magick. Tens of thousands of individuals and groups have used this course as their primary instruction manual. Now, greatly revised and expanded, this set of lessons is more complete and relevant to your life than ever. Written with respect for the student, Modern Magick will safely guide you--even if you know little or nothing--through a progressive series of practical exercises and rituals, complemented by the knowledge, history, insights, and theory you need to become a successful ceremonial magician. Firmly rooted in the Western magickal tradition yet designed to be fully compatible with your contemporary practice, this book will help you attain full mastery of all core topics in magick: The inner mysteries of the Kabbalah The most powerful rituals of magick How to create and perform your own rituals True meditation Magickal ethics Astral projection Tools of magick Evocation of spirits Pathworking Tantra and sex magick The importance of the Tarot Talismans and amulets Secrets of visualization Alchemy Psychic self-defense Healing rituals Filled with personal stories and helpful illustrations, along with updated and brand-new material, this new edition of Modern Magick features a completely new lesson that reveals the concepts, techniques, and rituals of Neuro-Linguistic Programming, Chaos Magick, and Postmodern Magick. Ideal for beginning, intermediate, or advanced students, and perfect as a manual for magickal temples, this is essential reading for every true magician. *Modern Magick is a modern-day classic. It has become the standard textbook of practical magickal knowledge for magicians all over the world. We highly recommend it to beginner and adept alike.*--Chic Cicero and Sandra Tabatha Cicero, authors of Experiencing the Kabbalah and Self-Initiation into the Golden Dawn Tradition
