Mooring Equipment Guidelines (MEG4) 100 D d D/d = 15 Figure 5.4: D/d ratio of mooring line to deck equipment It is recommended that designers of mooring arrangements aim for mooring fitting designs that result in a D/d of at least 15. This will ensure the performance reduction due to bending is kept to a minimum.

Mooring Equipment Guidelines (MEG4)
A ship's mooring equipment includes mechanisms, such as winches and capstans, that are used to take in and pay out mooring lines, which are ropes or steel cables. It also includes the following fittings: bitts and cleats, around which the mooring lines are made fast; stoppers, which temporarily hold the mooring lines; mooring chocks, rollers, and mooring pipes, which are used to change the direction of the mooring lines; manually operated or mechanized reels, on which the mooring lines are ...

The Mooring Equipment Guidelines is an industry publication for the safe mooring of tankers and gas carriers at terminals. These guidelines provide an extensive guidance for safe mooring for ships and terminals. This publication also provides guidance on human centred design for safer mooring arrangements. Purchase MEG4.

OCIMF - Oil Companies International Marine Forum - MEG4
A mooring is any permanent structure to which a vessel may be secured. Examples include quays, wharfs, jetties, piers, anchor buoys, and mooring buoys. A ship is secured to a mooring to forestall free movement of the ship on the water. An anchor mooring fixes a vessel's position relative to a point on the bottom of a waterway without connecting the vessel to shore. As a verb, mooring refers to the act of attaching a vessel to a mooring. The term likely stems from the Dutch verb meren, used in En

Mooring - Wikipedia
For newbuilding projects, DNV GL recommends that mooring equipment and line selection follow the holistic approach prescribed in the latest guidelines, in order to ensure "safe-to-use" design. Yiyang notes that newbuild designs should identify and accommodate relevant mooring patterns and ensure that design criteria for mooring components are well defined.

Taking a new look at mooring safety - Industry insights ...
The biggest difference between docking and mooring your boat is the equipment that you use. When you dock your boat alongside a wharf, dock, or pier, you will need dock lines, fenders, and other equipment to secure your vessel. A permanent anchor spot is referred to as a mooring, which requires a floating buoy, a rope line, chains, and an anchor.

Boat Mooring Guide - Boat Trader Blog
A heaving line is used to make contact with the wharf so that mooring hawsers may be passed ashore. To throw the heaving line, tie the whipped end on the rails or on your left wrist, and then coil all the line in your left hand, using small coils.
