This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following

purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. growers, and sightseers as a guide to the 67 genera and 550 species of naturally occurring palms found in the Americas. Its purpose is to give an introduction to the diversity of palms and allow almost anyone to identify a palm from this part of the world. Providing scientifically accurate descriptions and a rich supply of illustrations, including color photos taken in the wild of over 256 species, this guide is extraordinary in its coverage of the plant that has become for many people the symbol of the tropical landscape. Palms are not only aesthetically pleasing, but they also make up an economically and ecologically important family of plants. In industry, for example, the coconut, oil palm, and date palm have a wide and varied use. In the lowland rain forest, palms are usually one of the most abundant and diverse families of plants.
