In Surveillance Valley, Yasha Levine traces the history of the internet back to its beginnings as a Vietnam-era tool for spying on guerrilla fighters and antiwar protesters–a military computer networking project that ultimately envisioned the creation of a global system of surveillance and prediction. Levine shows how the same military objectives that drove the development of early internet technology are still at the heart of Silicon Valley today.

The internet is the most effective weapon the government has ever built. In this fascinating book, investigative reporter Yasha Levine uncovers the secret origins of the internet, tracing it back to a Pentagon counterinsurgency surveillance project. A visionary intelligence officer, William Godel, realized that the key to winning the war in Vietnam was not outgunning the enemy, but using new information technology to understand their motives and anticipate their movements. This idea -- using computers to spy on people and groups perceived as a threat, both at home and abroad -- drove ARPA to develop the internet in the 1960s, and continues to be at the heart of the modern internet we all know and use today. As Levine shows, surveillance wasn't something that suddenly appeared on the internet; it was woven into the fabric of the technology. But this isn't just a story about the NSA or other domestic programs run by the government. As the book spins forward in time, Levine examines the private surveillance business that powers tech-industry giants like Google, Facebook, and Amazon, revealing how these companies spy on their users for profit, all while doing double duty as military and intelligence contractors. Levine shows that the military and Silicon Valley are effectively inseparable: a military-digital complex that permeates everything connected to the internet, even coopting and weaponizing the antigovernment privacy movement that sprang up in the wake of Edward Snowden. With deep research, skilled storytelling, and provocative arguments, Surveillance Valley will change the way you think about the news -- and the device on which you read it.

Featured as a Guardian Long Read in December 2018 EVERYTHING WE HAVE BEEN TOLD ABOUT THE DEMOCRATIC NATURE OF THE INTERNET IS A MARKETING PLOY. As the Cambridge Analytica scandal has shown, private corporations consider it their right to use our data (and by extension, us) which ever way they see fit. Tempted by their appealing organisational and diagnostic tools, we have allowed private internet corporations access to the most intimate corners of our lives. But the internet was developed, from the outset, as a weapon. Looking at the hidden origins of many internet corporations and platforms, Levine shows that this is a function, not a bug of the online experience. Conceived as a surveillance tool by ARPA to control insurgents in the Vietnam War, the internet is now essential to our lives. This book investigates the troubling and unavoidable truth of its history and the unfathomable power of the corporations who now more or less own it. Without this book, your picture of contemporary society will be missing an essential piece of the puzzle.

Sanctions as War is the first critical analysis of economic sanctions from a global perspective. Featuring case studies from 11 sanctioned countries and theoretical essays, it will be of immediate interest to those interested in understanding how sanctions became the common sense of American foreign policy.

Activists, pundits, politicians, and the press frequently proclaim today's digitally mediated racial justice activism the new civil rights movement. As Charlton D. McIlwain shows in this book, the story of racial justice movement organizing online is much longer and varied than most people know. In fact, it spans nearly five decades and involves a varied group of engineers, entrepreneurs, hobbyists, journalists, and activists. But this is a history that is virtually unknown even in our current age of Google, Facebook, Twitter, and Black Lives Matter. Beginning with the simultaneous rise of civil rights and computer revolutions in the 1960s, McIlwain, for the first time, chronicles the long relationship between African Americans, computing technology, and the Internet. In turn, he argues that the forgotten figures who worked to make black politics central to the Internet's birth and evolution paved the way for today's explosion of racial justice activism. From the 1960s to present, the book examines how computing technology has been used to neutralize the threat that black people pose to the existing racial order, but also how black people seized these new computing tools to build community, wealth, and wage a war for racial justice.Through archival sources and the voices of many of those who lived and made this history, Black Software centralizes African Americans' role in the Internet's creation and evolution, illuminating both the limits and possibilities for using digital technology to push for racial justice in the United States and across the globe.

"[A] raucous, offensive, and sometimes amusing CliffsNotes compilation of wars both well-known and ignored." —Utne Reader Self-described war nerd Gary Brecher knows he's not alone, that there's a legion of fat, lonely Americans, stuck in stupid, paper-pushing desk jobs, who get off on reading about war because they hate their lives. But Brecher writes about war, too. War Nerd collects his most opinionated, enraging, enlightening, and entertaining pieces. Part war commentator, part angry humorist a? la Bill Hicks, Brecher inveighs against pieties of all stripes—Liberian generals, Dick Cheney, U.N. peacekeepers, the neo-cons—and the massive incompetence of military powers. A provocative free thinker, he finds much to admire in the most unlikely places, and not always for the most pacifistic reasons: the Tamil Tigers, the Lebanese Hezbollah, the Danes of 1,000 years ago, and so on, across the globe and through the centuries. Crude, scatological, un-P.C., yet deeply informed, Brecher provides a radically different, completely unvarnished perspective on the nature of warfare. "Military columnist Gary Brecher's look at contemporary war is both offensive and illuminating. His book, War Nerd . . . aims to explain why the best-equipped armies in the world continue to lose battles to peasants armed with rocks . . . Brecher's unrefined voice adds something essential to the conversation." —Mother Jones "It's international news coverage with a soul and acne, not to mention a deeply contrarian point of view." —The Millions

A distinguished political theorist sounds the alarm about the counterinsurgency strategies used to govern Americans Militarized police officers with tanks and drones. Pervasive government surveillance and profiling. Social media that distract and track us. All of these, contends Bernard E. Harcourt, are facets of a new and radical governing paradigm in the United States--one rooted in the modes of warfare originally developed to suppress anticolonial revolutions and, more recently, to prosecute the war on terror. The Counterrevolution is a penetrating and disturbing account of the rise of counterinsurgency, first as a military strategy but increasingly as a way of ruling ordinary Americans. Harcourt shows how counterinsurgency's principles--bulk intelligence collection, ruthless targeting of minorities, pacifying propaganda--have taken hold domestically despite the absence of any radical uprising. This counterrevolution against phantom enemies, he argues, is the tyranny of our age. Seeing it clearly is the first step to resisting it effectively.

A riveting investigation into how a restive region of China became the site of a nightmare Orwellian social experiment—the definitive police state—and the global technology giants that made it possible Blocked from facts and truth, under constant surveillance, surrounded by a hostile alien police force: Xinjiang's Uyghur population has become a cursed, oppressed, outcast population. Most citizens cannot discern between enemy and friend. Social trust has been destroyed systematically. Friends betray each other, bosses snitch on employees, teachers expose their students, and children turn on their parents. Everyone is dependent on a government that nonetheless treats them with suspicion and contempt. Welcome to the Perfect Police State. Using the haunting story of one young woman's attempt to escape the vicious technological dystopia, his own reporting from Xinjiang, and extensive firsthand testimony from exiles, Geoffrey Cain reveals the extraordinary intrusiveness and power of the tech surveillance giants and the chilling implications for all our futures.

Founded in 1958 in response to the launch of Sputnik, DARPA has been responsible for countless inventions and technologies that have evolved from the agency's mission- forward-thinking solutions to the Pentagon's challenges. Sharon Weinberger gives us a riveting account of DARPA's successes and failures, useful innovations and wild-eyed schemes- we see how the nuclear threat sparked investment in computer networking, which led to the Internet, as well as plans to power a missile-seeking particle beam by draining the Great Lakes...how, in Vietnam, DARPA developed technology for the world's first armed drones and was also responsible for Agent Orange... how DARPA's recent success with self-driving cars is counterbalanced with its disappointing contributions to the Afghanistan and Iraq wars. Weinberger has spoken to dozens of former DARPA and Pentagon officials--many of whom had never been interviewed before about their work with the agency--and synthesized countless documents obtained under the Freedom of Information Act. The result is a riveting history of a meeting point of science, technology, and politics.

This book critically interrogates the relationship between social media and protest from an interdisciplinary perspective, examining the multiple ways in which we need to politicize and contextualise commercial social media platforms, in particular with regards to their use for the purposes of anti-systemic and progressive protest movements.
