Soft seated valves should normally be selected only for clean service. Soft seated block valves, such as ball valves, lined plug valves, soft seated gate valves, and butterfly valves can provide a good tight shut off on gas or liquid when new. Hard metal seated valves should normally be selected if the service is other than clean. 2.

The most common types are ball valves, butterfly valves, globe valves, and gate valves.

Control Valve Basics: Sizing and Selection

$C_v = (\text{Flow}) \times m (\text{Specific gravity of the media at flowing temperature/pressure drop})^{1/2}$. A common mistake is calculating too high of a C_v by using the maximum flow rate, which results in selection of an oversize valve. The range of flow (min, max and mean flow rates) should be utilized to properly size the valve.
